EXPERIENCE

Fusion Auto Finance, Bedford TX — Full Stack Software Engineer

September 2024 - PRESENT (Full time)

As a member of a small team of engineers, I am responsible for maintaining legacy web services and contributing to new company-wide projects. This involves: fixing bugs, responding to tickets, collaborating with remote team members, designing webpages, writing new business models and logic in Python using Django and managing deployments on FreeBSD.

Triple Play Pay, Remote — Full Stack Developer

May 2023 - May 2024 (Contract)

At a startup payment platform I was tasked with writing integration code for a variety of platforms. While working here I wrote backends in Python and web frontends in Vue3. I wrote SDKs for Android, IOS and contributed to a React-Native wrapper. I was responsible for managing the NPM, Cocoa pods and Maven packages for these.

GearMinds STEM Academy, Frisco — Instructor / Coach

August 2021 - PRESENT (Contract)

While enrolled in university classes I worked as an instructor for an afterschool robotics program. Here I've taught kids from 1st grade to high school about programming, basic electronics, mechanics and other STEM subjects. Now that I am out of school, I serve as the coach for a First Tech Challenge team during the season. We meet in the evening so it allows flexibility with other jobs.

EDUCATION

University of North Texas, Denton TX — Bachelors of Science in Computer Science and Computer Engineering

Graduated May 2024

SKILLS

Software Development

Python / JavaScript / Bash / C

Django / Flask / Vue3
